THERMEX TODAY

International corporation of heating equipment
to the benefit of many generations

Most people around the world, choosing sophisticated home appliances, prefer to deal with professionals.

The real world-class professionals are units. One of the world's leading specialized manufactures of water heaters is Thermex corporation. Since it's foundation, for 70 years, the company has remained to be faithful to it's specialization — the production of water heating equipment and has achieved in this field the highest skill.

Today we work in the markets of 60 different countries located in four continents. Our production facilities are located in Russia, China, Turkey and other countries. Corporation's business units are in many countries of the world and in each of them we not only realize certain types of products, but we organize the unified world technological chain:

- Scientific and technical research and new products development
- Work with suppliers of raw materials and components
- Full cycle of production, from processing raw materials to testing finished products
- Logistics complex: transportation, storage, delivery to customers or immediately to the customer
- Professional installation, warranty and after-sales service

All this is work of the corporation!

THERMEX AT A GLANCE

Thermex philosophy

We work to provide you with a reliable, autonomous, environmentally friendly source of hot water for both domestic and industrial needs. We not only produce advanced technology, but also offer a full range of services that meet the requirements of a modern customer.

Our values

We fill your homes with warmth and comfort. We help you improve the quality of life and give one more degree of personal freedom and comfort. We develop new products, produce, help in the selection, deliver, install, provide warranty service and support.

Our mission

Creating a comfortable, long life through the production of advanced and affordable products in order to meet the people's requirements of wellness.

2016

Quality
is the key
competence

THERMEX QUALITY AND RELIABILITY

We pay a lot of attention to the quality of the goods we produce.

We are sure that manufacturer can only get success by supporting high quality level. Only best components and raw materials are used linked with skilled and scientific procedures to comply to our quality standards.

We strive to ensure that our technology has worked reliably for many years, and we achieve our goal!

- Quality control at every stage of the production process.
- R&D laboratory and Quality laboratory for testing innovation and actual operating conditions.
- Computerized quality control
- Long-term research programs

Modern production facilities

Many water heating industry consultants with expertise in water heaters admit that Heating Equipment production site operated by Thermex Corporation is so far one of the most technically advanced and high-tech industries in the world. A group of leading experts that includes the best engineers from Italy, Switzerland, Germany and Russia has been involved in this project realization.

Russian factory

The total production area of main Thermex factory is 60000m². The turnout is more than 2 million water heaters per year. Today it is one of the largest factory in terms of water heaters production output in Europe. The automation degree of technological processes is more than 90%. The production rate is as follows: every 15 seconds a new water heater comes off the assembly line.

Chinese factory

Thermex Heating Technology — a China factory of the Thermex Corporation was put into operation in July 2017. The factory has established a global R&D center with unique scientific, experimental design and laboratory equipment.

Innovations

As a specialized manufacturer of water heaters, Thermex Corporation has created its own scientific laboratories and engineering offices. All activities on study, development and implementation of innovative technologies are carried out there.

The results of long-term research programs is associated with a number of unique technologies with a number of unique technologies developed and patented by Thermex Corporation for production reliable, user friendly and energy efficient water heater appliances.

Turkish factory

A new Thermex corporation factory in Turkey was put into operation in 2019 year with 3000 m² of total closed area and 1 500m² of open area. The factory located in Izmir which close to the Eagean sea and to all transportation alternatives. The factory includes test lab with line-test and R&D test machines.

THERMEX ENERGY EFFICIENCY

ERP directive

The ErP (Energy-related Products) Directive is due to be implemented in 2015. It consists of new regulations to help the EU achieve its 20/20/20 target to reduce energy use by 20% and increase the share of renewable energies by 20% to 2020.

On September 2017, new EU regulations impacting heating and hot water appliances will come into force. They specify minimum energy efficiency and emissions standards for products and systems. After their introduction non-compliant appliances and systems will be progressively phased out.

Improving the efficiency

Today, as a professional water heaters manufacturer, Thermex must meet the challenge of the more strict requirements of ErP Directive.

As an innovative company we understand the importance of improving the energy efficiency in energy-related products for the customers and for global environment. We support the ErP initiatives of the EU and believe that it would help to structure the market of electric water heaters in Europe.

Priorities for Thermex

Thermex systemic task is associated with development of competitive products with high energy efficiency performance. Our aim is to produce such products that help to decrease costs of the household being spent for the comfort of having hot water.

The goal worked upon by the corporation engineers is to produce products reducing end-users expenses for home comfort coming with hot water. The desire to improve the quality of the customers life with simultaneous reduction of their utility costs is the main idea of Thermex products.

THERMEX ERP LABEL

The ErP (Energy-related Products) European policy consists of two directives: eco-design and energy labeling. It aims to improve the energy efficiency of water heating equipment and other appliances sold in the European Union in order to help to protect the environment.

Energy labelling

Encourages customers to purchase the most effective home products by highlighting their energy classes.

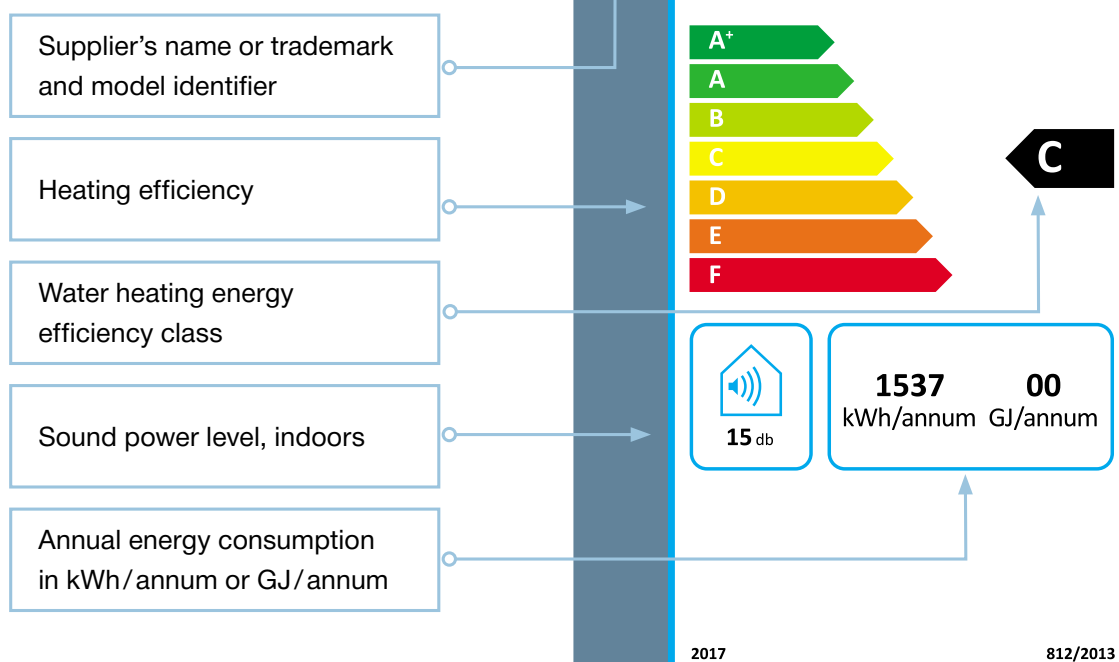

Ecodesign

Sets down minimum energy performance values to be achieved thanks to required investment in appliances.

Each next step of the ErP regulation from 2013 to 2020 is equivalent to more stringent requirements and promotion of the most efficient products — revision of minimal performance requirements and revision of label with new classes.

Thermex water heaters series launched since 2015 were already identified with an easily visible energy labels.

“
Improving
the energy efficiency

SMART HOME TECHNOLOGIES

Thermex is constantly developing new technologies and innovating in production. From the creation of intelligent technologies, Thermex provides data integration into equipment adapted to work with modern Smart Home concepts.

This direction allows to create equipment for a new level of comfort, ergonomics and caring for people.

Using a Wi-Fi connection is a prerequisite for the modern concept of a Smart Home. It combines equipment for widespread use. The concept allows you to receive an information space in order to create a convenient and comfortable home for owner.

Smart Home is a new step into the future, implemented together with high-quality, reliable and modern Thermex equipment.

Wi-Fi Motion Wireless Technology

Wi-Fi Motion is a technology that provides stable multi-user wireless communication with Thermex devices. Wi-Fi internet connection implies the convenience of remotely controlling appliances in the apartment, office, country cottage or anywhere in the world.

At the country house

Storage water heater Flat Plus Pro Wi-Fi

Start water heating from your mobile device only when it's necessary. For example, a couple of hours before a trip to a country house.

Convactor Frame E Wi-Fi

Combine several heating appliances into a group and control them as a single device, or adjust the automatic heating depending on the outdoor temperature.

BIO TECHNOLOGIES

The international fame of Thermex is achieved by its legendary water heater series with Bio-glasslined coating of inner tank which is recognized as the most durable and resistant to corrosion and the effects of thermal and hydraulic shocks.

Thermex is the absolute authority in the production of reliable and affordable water heaters and proudly proves that even low-cost models can work for many years, if it is Thermex water heaters.

BIO

Bio-glasslined

Is a unique patented coating of inner tank with the highest anti-corrosion protection with environment attention. It has much greater durability and elasticity than normal enamel coating, and successfully withstands to thermal and hydro shocks. Bio-glasslined much longer protects the tank from corrosion which is a major cause for water heater's failure.

Cold Rolled Steel

Only the highest quality cold rolled steel is used for inner tanks of Thermex BIO series. This steel is much more durable and plastic than the hot rolled steel which most of the world famous brands of water heaters are made of. In this case steel has a more smooth surface which significantly strengthens the grip of protective coating and prevents the appearance of micro cracks.

Oxygen Free System

The exclusive technology of Bio-glasslined coating in the inert gas conditions.

The durability of the inner tanks coating is the key to long life of water heater. Tiny air bubbles or micropores in the coating can lead to pitting and water heater's failure. Oxygen Free System eliminates air entrapment and ensures the safety of the inner tank for the entire lifetime period.

Ultra Sonic Test

An effective quality control system of protective coating by ultrasonic scanning.

The highest level of quality is not possible without advanced control systems. Therefore, Thermex has developed its own system for ultrasonic testing of the inner tank for detecting even the smallest, invisible to the eye, defects in coating with a 100% guarantee.

The unique coating SilverHeat of heating element prevents the appearance of scale and creates an anti-bacterial effect inside the water heater.

Economical.

High-density thermal insulation made of polyurethane foam allows you to keep hot water longer without additional waste of electricity.

Ease of use.

The simple mechanical control PRESS & TURN helps to easily use the water heater and changing the heating temperature in one motion.

Functionality.

The light indication informs about switching-on of the water heater.

INOX TECHNOLOGIES

STAINLESS STEEL

With 70 years of experience in the production of heating equipment, Thermex does not use the existing solutions, but implements the unique technologies in production that provides high reliability and durability of the stainless steel inner tanks of water heaters.

G.5

G.5 Complex

G.5 Stainless Steel Highest Standard is a complex of unique technologies of the latest generations, created to provide integrity structure of Thermex stainless steel inner tanks and corrosion protection.

ASTN+

Special non-corrosive stainless steel of inner tanks Thermex. Unlike ferritic steel, the high-alloyed (austenitic) steel ASTN+ doesn't rust even at high pressure and frequent temperature changes which are the normal conditions of the water heater's work.

C.M.T.

Cold Metal Transfer is a modern technology of cold welding, creating the most reliable seam welds.

The temperature of cold welding 2.5 times lower than the common welding, that's why alloying additives are not burned. The lattice of the welded metal retains sustainable structure that allows to make the weld joints which are not corrosion.

TIG-tronic

The complex of automatic robotic welding excludes the possibility of inhomogeneous welds and metal overheating. Thanks to the fine calibration of high-precision robots, the perfect duplication for its absolute strength.

GS-Duo

Double feeding of the protective gas in the welding area almost completely displaces the oxygen, creating an area close to technical vacuum. The welding process becomes absolute stable, and the weld is twice corrosion resistant.

Total Quality Control

Double Tank is a special design of a flat water heater with two inner tanks. Thermex has developed such a design to make flat water heaters as reliable and resistant to water hammering and temperature changes, as well as round models. In this case Double Tank water heaters are compact in size and easily fit into small rooms.

ELECTRIC STORAGE WATER HEATER SERIES

FLAT DIAMOND TOUCH PRO — ID (PRO)

Flat Diamond Touch Pro — premium series of water heaters. Recognized quality, stylish dark design and the ability to wirelessly control from mobile devices — all this allows the novelty to claim the title of the most progressive and attractive water heater in Thermex model range.

ELECTRIC STORAGE WATER HEATER SERIES

ULTRASLIM — IU

The slimmest model in the range! Stainless steel series with space saving ultra-slim diameter for easy installation in the limited places.

Stainless steel inner tank G.5

Fast heating mode

Slim models

Steel outer casing

Mechanical control

5 years inner tank warranty

Wide possibilities in a narrow case

Compactness.

A diameter of 27 cm helps to locate the water heater even in the smallest bathrooms, kitchens, in corner niches and rooms with non-standard design.

Safety.

Stainless steel inner tank G.5 has a high corrosion protection.

Different settings.

Three modes of heating, including quick and eco.

Economical.

High-density thermal insulation made of polyurethane foam allows you to keep hot water longer without additional waste of electricity.

Mechanical control.
Lower water outlet connections

A reliable mounting bracket

in any place

COMPACT ELECTRIC STORAGE WATER HEATERS

Compact Thermex water heaters are designed to supply hot water in small volumes. Suitable for small apartments and country houses.

Advantages

Reliability

The internal tanks of the water heaters are protected against corrosion — the main reason for the breakdown of such equipment — which ensures a long and stable operation.

Ease of use

There are protection functions against accidental activation, and all controls are located in one place, which helps to conveniently adjust the temperature — literally in one motion.

Easy installation

Low-pressure water heaters include under and over sink mounting models, which makes it convenient to place the water heater even in a small space.

**Compactness.**

10 and 15 liters water heaters are perfect for small apartments and country houses.

High reliability.

Stainless steel inner tank G.5 with corrosion protection ensures stable and long-life operation.

High efficiency.

This model provides high power (2.5 kW), which gives the fastest heating of water — in just 12 minutes.

Ease of use.

The simple mechanical control PRESS & TURN with child protection helps to easily use the water heater and changing the heating temperature in one motion.

Modern design

Impact-resistant plastic body

For stable
and trouble-free
work

LARGE VOLUME OR COMBINED ELECTRIC STORAGE WATER HEATERS

Large volume or combined water heaters are designed to produce large amounts of hot water in private homes, cottages, small and medium-sized businesses.

Advantages

Great volume

Floor models with a volume to 300 liters.

Improved energy efficiency

The increased layer of high-density thermal insulation keeps the hot water longer without additional waste of electricity.

Durability

Internal tank protection technologies and magnesium anodes increase the protection of water heaters from corrosion and ensure stable and trouble-free work.

Universal electrical connection

Possibility of single-phase (230 V) or three-phase connection (400 V).

Compatibility

Integration in home heating system for indirect heating of water without electricity.

ELECTRIC COMBINED WATER HEATER SERIES

COMBI INOX PRO — IRP (COMBI) PRO

Professional line. New large-capacity stainless steel combined water heater with stainless steel inner tank G.5 and two stainless heat exchangers.

Designed to work simultaneously with two alternative energy sources — a heating boiler and a solar collector. It is easily integrated into the heating system and has a high indirect heating rate — 200 liters of water are heated at 45 degrees in just 15 minutes.

Maximum integration

Combined water heaters constructed to become a part of any modern heating system and multiply its efficiency by integration with:

Central heating systems

Gas and fuel boilers

Heat pumps

Solar collectors

... and other popular types of domestic heating sources.

Maximum efficiency

The internal heating controlled by a double safety thermostat and temperature setting knob, through the coil may work combined with the external heating system, having so a double heating source for maximum performance of hot water. Switched heating element "off" letting the water being heating by the external source via the coil; with the element "on" and the external heating system "off" it helps saving energy in the summer month.

Maximum reliability

COMBI series provide optimum reliability even when working with more severe conditions than a conventional water heaters. Inner tank and heat exchanger are covered by Bio-glasslined coating with highest grade of anti-corrosion protection. Long life of COMBI heaters provided by using high level quality raw materials and spare parts with multi-stage quality control on production lines.

ELECTRIC INSTANTANEOUS WATER HEATERS

Compact, fast and reliable Thermex instantaneous water heaters completely solve the problem of hot water supply, especially when warm water needed immediately. Among the models of instantaneous water heaters, it is easy to choose with requested power and functionality.

Advantages

Compactness

All models have a modest size, which allows you to save free space of kitchen or bathroom.

Performance

Instantaneous water heaters do not have a water volume limit and instantly supply hot water — as much as necessary.

Technology

Stainless steel highly efficient spiral heating element ensure uncompromisingly fast and uninterrupted water heating.

Usability

Thermex instantaneous water heaters are user-friendly. Heating the water begins instantaneously with the opening of the tap.

Efficiency

Instantaneous water heaters using implies the consumption of electricity only at the time of hot water direct use.

Safety

IP rating IP25, overheating protection, protection against switching on without water and protection from air plugs.

ELECTRIC INSTANTANEOUS WATER HEATER SERIES

TOPFLOW PRO

The most advanced 3-phase electric instantaneous water heater with intelligent technology and modern design.

Safety heating
in modern design

Convenient use.
Jam 3000 instantaneous water heater is easy to install instead of a conventional kitchen faucet and plugs into a conventional wall outlet.

Simple operation.
The water temperature and pressure are set by a mechanical regulator, like a conventional faucet, and a light indicator on the body will tell you about heating activation.

Instant heating.
3000 W stainless steel heating element heats up instantly when the tap is opened, providing 2 liters of hot water per minute.

Comfort.
The spout rotates 360 degrees.

Durability.
Ceramic cartridge Sedal intended for a million cycles. SUS304 stainless steel heating element and inner flask. Check valve providing protection against switching on without water and safety valve protects against water hammer and overpressure.

Silent air heating
in your home

ELECTRIC CONVECTORS

Heating equipment with heating due to natural air circulation.

Advantages

X-PROF aluminum heating element

Monolithic X-shaped heating element with a heating thread located in a housing with an increased number of fins. Heating element with strong and durable design reduces heat loss during heating. Non-linear heat distribution with silent work increases heating efficiency and heat transfer of the heating element.

Multilevel security system

IP24 — protection against splashes of water and mechanical pollutants with a diameter more than 12 mm. Switch off after rollover and overheating protection.

MonoBlock design

Hidden output of convection windows.

Eco

Environmentally friendly — do not dry the air.
Economical due to high efficiency — from 80%.

HEATING PANELS

Thermex ceramic heating panels with the optimal combination of efficiency and heating power with low electricity consumption can heat a big area. They have an original design and convenient controls, which makes their use comfortable and helps fit the panel into the overall interior of the room.

Advantages

Productivity

A panel with a power of 550W can heat rooms up to 12 square meters, which is comparable to the performance of standard convectors, consuming double energy size.

Environmentally friendly

Ceramic panels are distinguished by a modern heating method, preserve the natural humidity of the air and do not create an unpleasant smell of burnt dust.

Safety

Heating panels have a safe surface temperature, therefore they are highly fireproof and do not cause burns if accidentally touched. The second class of electrical protection does not require RCD and grounding.

Profitability

Due to optimum power and high energy efficiency, Thermex heating panels consume less electricity than a standard convector or oil cooler.

ELECTRIC HEATING PANEL SERIES

COLORME

The new ColorMe ceramic heating panel is an efficient, economical and modern heating equipment. The series has high overheat protection and safe surface temperature, therefore it is highly fireproof and do not cause burns if accidentally touched.

“
The warm part
of your interior

**Can be painted.**

ColorMe can be painted and repainted with water-based paints and crayons, creating an individual panel design.

High security.

ColorMe has overheat protection. The second class of electrical protection does not require an RCD and grounding.

Comfort.

When heated, the surface temperature of the panel does not rise above 80°C, so that it does not dry air, does not create a smell of burnt dust and does not burn when accidentally touched.

Energy efficiency.

ColorMe power is only 550W, but it heats an impressive area of up to 12 square meters, which corresponds to the performance of conventional convectors with a power of 1000 watts.

Simple operation.

Tuning is done using the electronic panel on the case.

ELECTRIC WALL HUNG BOILERS

Electric double-circuit boilers with high quality and functionality has reliable components and completely solves the issues of heating and hot water supply.

Advantages

Quality

Is made of high quality components ensuring its reliability, durability and high efficiency. Modern security systems confirm a high service life with warranty.

A wide range

Models with different power range allow you to choose equipment for any task.

Easy control

The ability to automatically maintain the desired temperature using a room thermostat or an outdoor temperature sensor saves up to 15% of energy. The Winter-Summer mode is provided with standard work settings.

Durability

All components used in the product are top quality products in their field.

Simple maintenance

The design provides easy access to boiler parts and simplifies maintenance, and an intelligent self-diagnosis system will automatically detect a failure and display an error code on the boiler front panel.

ELECTRIC WALL HUNG BOILER SERIES

EUROSTAR — E9

The new star of electric double-circuit boilers with high quality and functionality has reliable components and informative LCD display. This series completely solves the issues of heating and hot water supply. Operation convenience is provided by a self-diagnosis system.

INSTANTANEOUS GAS WATER HEATERS

Instantaneous gas water heaters — a convenient and economical way for hot water supply. Compact gas water heaters are characterized by high power, performance and ease of maintenance.

Advantages

Compactness

Instantaneous gas water heaters have small depth so conveniently place even in small kitchens or bathrooms.

Reliability

A high-quality reinforced oxygen-free copper heat exchanger is characterized by the highest durability and energy efficiency.

Productivity

Heat up from 10 liters of water per minute.

Profitability

The use of gas as an inexpensive source of energy makes instantaneous gas water heaters the most economical and convenient supplier of hot water.

Adaptability

Supported work with both natural and liquefied gas — if the nozzles are replaced.

GAS INSTANTANEOUS WATER HEATER SERIES

Stylish control panel

Micro-computer intelligent control system.

The core component of the gas water heater is micro-computer intelligent control system, which is one of today's most advanced mechatronic technology. The CPU chipset can analyze automatically and set the optimal working parameter rapidly according to different data such as the flowing water quantity, the pressure situation and the actual inlet water temperature.

Digital control for automatic constant temperature of outlet water.

This function monitor the outlet water temperature by a temperature sensor and transfer the information to the micro-computer, so that the micro-computer could adjust the gas and air supply quantity to guarantee the constant outlet water temperature according to the temperature set by the user and the actual inlet water temperature automatically.

Low start-up water pressure.

The minimum water pressure of this product could reach 0.2 MPa, so it could also be used in the residence area with low water pressure.

AI artificial intelligent memory function.

The gas instantaneous water heater could work with the temperature that you set last time when you restart it, so that you do not need to set the temperature again.

Effective and energy-saving.

This product has advanced technologies called Strengthened Combustion and Forced Combustion. These patents aim to make the best use of heat energy with high working efficiency.

Set temperature by touch.

You could set the required temperature easily by touching LCD display. The setting temperature is from 35°C to 65°C, which can meet different water temperature requirements with easy operation.

Multiple safety protection.

This product has safety protections includes self-check protection, flame-out protection, over-heat protection, accidental power-cut protection, fan breakdown protection, over electric load protection, electric leakage protection, over wind pressure protection, over temperature protection, timing protection etc.

GAS BOILERS

Thermex double-circuit gas boilers simultaneously solve the problems of autonomous heating and hot water supply in an apartment, private house, country house or in an enterprise. Using a gas boiler, you can heat up to 320 square meters and ensure uninterrupted supply of hot water without auxiliary devices.

Advantages

Profitability

A gas boiler uses natural gas or liquefied gas (after replacing nozzles), which is more economical than solid fuel or electric boilers.

Quality

Each Thermex boiler is designed for long-term intensive use, therefore all components are of high quality, reliability and have a full 2 year warranty.

Compactness

Thermex gas boilers are small size, so you can place them in any room.

Safety

Thermex gas boilers are completely safe. If there is any deviation from normal operation, the gas supply stops.

High productivity

Due to the increased volume of the expansion tank, Thermex boilers can service high-capacity heating systems.

Technological effectiveness

Thermex gas boilers meet all the requirements of modern technologies, they are reliable and intelligent thanks to convenient control via the Open Therm protocol.

GAS WALL HUNG CONVENTIONAL COMBI BOILER SERIES

XANTUS (PRO)**Advanced features**

- High efficiency up to 91,2 %
- All components used in the product are top quality products in their field and supplied from European suppliers
- With 2 different capacity of 24 kW and 28 kW, possibility of using various areas and places
- 2 star combustion performs according to 92/42 EEC and high efficiency up to 92%
- Hermetic type
- High modulating range with combined gas valve with wide modulating range
- Strong circulation pump with 3 speeds
- Aesthetic outlook with modern design
- Stainless steel burner
- High DHW volume with stainless steel plate heat exchanger for hot water production (for DHW)
- Electronic ignition system and microprocessor main board
- Quite operating feature
- Providing easy in assembly and service application with compact dimensions
- Easy to use with specially designed control panel with ergonomic digital display
- Possibility to connect room thermostats, digital display and knobs
- Smart fault diagnostics, fault correction and warning system
- Double heat exchanger system; copper main heat exchanger + stainless steel heat exchanger for domestic hot water
- Low combustion and emission with large modulating system by electronic card
- Has got protection system with 13 superior safety system

Advance safety systems

- Ignition and flame safety
- Air safety system (with APS)
- Automatic air discharge purger
- Low voltage protection
- Frost protection
- Pump anti-blocking protection
- 3-way valve anti-blocking protection
- 3-bar safety valver
- Low water pressure switch
- Hot water temperature sensor
- Overheating safety system for heating
- Domestic hot water (DHW) flow sensor
- Expansion vessel

Advantages

Excellent heat transfer with copper heat exchanger (CH):

High efficiency durable, heat resisted, copper heat exchanger for central heating system.

Stainless steel heat exchanger for DHW.

Provides high flow ratio with own plate design.

Stainless steel burner.

Stainless steel burner has high combustion efficiency and low gas emissions.

Sanitary water (DHW) heat exchanger.

Stainless steel plate heat exchanger and brass hydraulic block are used to produce the hot water demands.

High efficiency.

Provides 91,2% efficiency, low emission and low noise levels with perfect harmony of Polidoro burner and Valmex heat exchanger.

User friendly digital control panel.

Ensures the user to see many operating parameters through digital display, easy to use.

Expansion vessel.

Compensates the expansion of the hot water circulated in the central heating circuit. All capacities use the same, 8 liter, closed expansion vessel.

Compact dimension.

It fits even in narrow area with its compact, W: 399mm, D: 335mm, H: 710mm

Digital display.

Shows many parameters and user can follow and see many details over the display.

Control board

User friendly control panels

Thermex Xantus (Pro) boilers are equipped with easy to use control panel. The control panel has a 1.3" digital display where many data of the boiler can be monitored. With the 2 knobs located on the control panel, sanitary hot water and central heating temperature adjustment as well as service parameter adjustments are possible. Further a manometer on the control panel provides monitoring of central heating circuit water pressure.

Stainless steel burner has high combustion efficiency and low gas emissions.

Sanitary water (DHW) heat exchanger:

Stainless steel plate heat exchanger and brass hydraulic block are used to produce the hot water demands.

High efficiency:

Provides 91,2% efficiency, low emission and low noise levels with perfect harmony of Polidoro burner and Valmex heat exchanger.

User friendly digital control panel:

Ensures the user to see many operating parameters through digital display, easy to use.

Expansion vessel:

Compensates the expansion of the hot water circulated in the central heating circuit. All capacities use the same, 8 liter, closed expansion vessel.

Compact dimension:

It fits even in narrow area with its compact, W: 399mm, D: 335mm, H: 710mm

Digital display:

Shows many parameters and user can follow and see many details over the display.

User friendly control panels

Thermex Antares boilers are equipped with easy to use control panel. The control panel has a 1,7" digital display where many data of the boiler can be monitored. With the 2 knobs located on the control panel, sanitary hot water and central heating temperature adjustment as well as service parameter adjustments are possible. Further a manometer on the control panel provides monitoring of central heating circuit water pressure.

GAS WALL HUNG CONDENSING BOILER SERIES

RIGEL ERP**General common features**

- High efficiency with premix condensing technology
- With 3 different capacity of 24 kW, 27,99 kW and 35 kW, possibility of using various areas and place
- A class energy efficiency for installation and DHW production and XL DHW using profile in accordance with ErP Regulations
- All components used in the product are top quality products in their field and supplied from European suppliers
- Modulating range between 21 — 100% with combined gas valve with wide modulating range
- High efficiency with premix combustion assembly consisting of integrated air / gas mixer, modulating fan, stainless steel burner and stainless steel heat exchanger
- High DHW volume with stainless steel plate heat exchanger for hot water production
- Electronic ignition system and microprocessor main board
- Quite operating feature
- Easy to use with specially designed control panel and with ergonomic digital display and knobs
- Smart fault diagnostics, fault correction and warning system
- High safety standards with 14 different advanced safety system
- High combustion efficiency in accordance with EN 15502-1, 15502-2-1 directives
- Easy installation and space saving with compact dimensions
- Possibility to connect room thermostats

Advance safety systems

- Ignition and ionization electrode
- Flue/air safety system
- Automatic air purge
- Low/high voltage protection
- Antifreeze protection
- Pump anti-blocking protection
- 3-way valve anti-blocking protection
- 3-bar safety valve
- Low water pressure switch
- DHW temperature sensor
- Central heating circuit and DHW safety system
- DHW flow turbine safety system
- Filling tap
- Ignition and flame safety

High ErP
efficiency

Advantages

Stainless steel premix heat exchanger.

High efficiency and long-lasting. Made of stainless steel.

Premix burner.

Consists of integrated air/gas mixer, modulating fan, and stainless steel burner. Stainless steel burner has high combustion efficiency and low gas emissions, is eco-friendly.

Domestic hot water (DHW) exchanger.

Stainless steel plate heat exchanger and brass hydraulic block are used to meet the sanitary hotter demands.

High efficiency:

Provides seasonal central heating efficiency up to 93% (this corresponds, 108,1% seasonal heating efficiency according to the former standards).

User friendly digital control panel.

Ensures the user to see many operating parameters through LCD display, easy to use.

Modulating circulating pump.

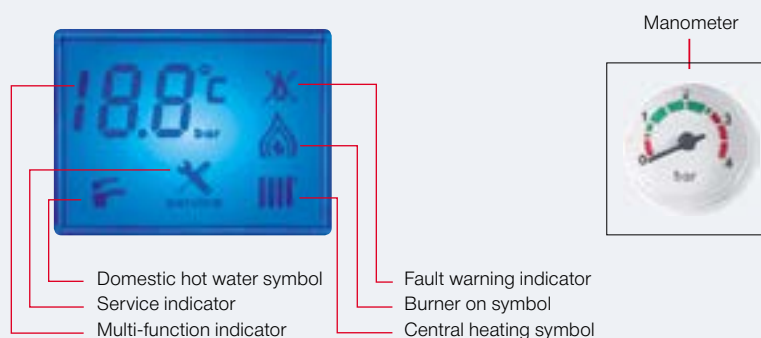

Conforms ErP regulations, high efficiency and low power consumption.

Closed expansion vessel.

Compensates the expansion of the hot water circulated in the central heating circuit. All capacities use the same, 8 liter, closed expansion vessel.

User friendly control panels

Thermex Premix Condensing boilers use a user friendly control panel. The Control Panel has a 2.1" wide digital display where many data of the boiler can be monitored. Through with knobs on the control panel you can easily set central heating temperature and domestic hot water temperature and modify service parameters as well. The manometer located on the control panel allows you to monitor the central heating system water pressure. Further through the reset button you may reset your boiler if required.

REMOTE CONTROL

With smart room thermostat you may control the temperature of your house with mobile applications from wherever you are on the world.

For series: XANTUS (PRO), RIGEL, SIRIUS, ANTARES

**Manual
mode**

**House
mode**

**Outside
mode**

**Sleep
mode**

**Program
mode**

**Position
mode**

The smart location

The smart location feature of HT 400 and HT500SET smart thermostats you may decrease the temperature of your house when you leave or increase when coming your house.

Temperature of your house

Through mobile applications you may see in graphics the operating hours of your boiler, the temperature of your house and outside temperature and may get report towards the past.

Select the best heating mode

You may select the best heating mode to manage the temperature of your house via 6 different modes of your Remote Controlled Digital Smart Thermostat.

ROOM THERMOSTATS

Your room thermostats control the temperature in your living area effectively to provide a comfort living.

HT 120 digital room thermostat with cable

- Up to 30% savings in heating costs
- High comfort
- Digital lcd display
- Easy usage
- Sensitive temperature measuring
- On-off control
- Heating calibration
- With wire options
- Supplied with thermex brand

HT 150 digital room thermostat with cable

- Up to 30% savings in heating costs
- High comfort
- Large lcd display
- Battery indicator
- Easy usage
- Sensitive temperature measuring
- On-off control
- Heating calibration
- With wire options
- Supplied with thermex brand

HT 500 set remote controlled smart digital room thermostat

- Temperature adjustment via room thermostat
- Digital lcd display with backlight
- Touch buttons
- Outside temperature indicator
- Battery indicator
- Daily and weekly program
- Smart or normal wireless room thermostat
- 6 different modes options:
 - Manual mode*
 - House mode*
 - Outside mode*
 - Sleep mode*
 - Program mode*
 - Position mode*

HT 400 remote controlled smart digital room thermostat

- Control with mobile application
- Control your house temperature with location mode
- Past operating and heat data reports
- Daily and weekly program
- Weather forecast
- 6 different modes options:
 - Manual mode*
 - House mode*
 - Outside mode*
 - Sleep mode*
 - Program mode*
 - Position mode*

GAS WALL HUNG BOILER SERIES

EUROELITE — F

A modern gas double-circuit boiler that completely solves the issues of heating and hot water supply. The gas boiler was designed by engineers on the basis of a long study of consumer preferences and demanded characteristics, therefore, it received a wide model range with power from 18 to 32 kW and is able to heat large rooms with an area of up to 320 m².

Separate heat exchangers for heating and water supply

Operation with liquefied gas or natural gas

Instant hot water supply

Multistage security system

Self-diagnosis and error indication

2 years warranty

**Quality.**

EuroElite is made of high quality components ensuring its reliability, durability and high efficiency. Modern security systems confirm a high service life with a full 2 years warranty.

Durability.

Separate heating and hot water heat exchangers ensure trouble-free operation and easy maintenance.

A wide range.

Models with power from 18 to 32 kW allow you to choose equipment for any task.

Easy control.

The ability to automatically maintain the desired temperature using a room thermostat or an outdoor temperature sensor saves up to 15% of energy. The Winter-Summer mode is provided with standard work settings.

Simple maintenance.

The design provides easy access to boiler parts and simplifies maintenance, and an intelligent self-diagnosis system will automatically detect a failure and display an error code on the boiler display.

HOW TO CHOOSE A STORAGE WATER HEATER

Choosing the right volume of storage water heater allows you to optimize waste and do not stay without hot water when it is necessary. A special selection table tells you which series you may choose.

Number of persons	1	1	2	3 — 4	4 — 5
Number of consumption points	1	2	3	4	
Electrical network power (weak / medium / high)	  	  	  	  	 
Recommended volume	10 — 30 l	30 — 50 l	50 — 80 l	80 — 150 l	150 — 300 l
Suitable series of water heaters					
	Compact water heaters		Standard water heaters		Large volume floor standing water heaters

Solo, Fusion, Ultrastim, Praktik, Eterna, Safedry Pro, Thermo, Champion, Champion Eco, Silverheat, Nova, Giro, Titaniumheat

Flat Smart, Ceramix, IF Eco, Flat Plus Pro, Flat Eco, M-Smart, Mechanik

HOW TO CHOOSE A INSTANTANEOUS WATER HEATER

To choose instantaneous water heater that meets your needs, it is necessary to determine in advance where and how much hot water will be needed. Particular attention should be given to the electrical wiring, which should be suitable for the selected capacity. The selection table will help you make the right choice.

Points of consumption				
Use cases	To wash hands	To take a shower	To take a shower, wash your hands at two points of consumption	To take a bath, shower, wash your hands at three to four points of consumption
